

Dear uploader,

This is a tutorial from developer, to upload student result you have to make a .csv or .CSV file first. You can make .xls file and normally save that as .csv and make sure the the ate the time of save you select "utf-8" from the dropdown this is very easy.

step-1: Make your csv file as like the database column name. In database we have 11 columns check image-1.

NB: Do not put column name on you excel..just follow the column name and enter your data.(check image-2).

Enter Student **s_id** and **name**

step-2: Enter the **b_id** (Batch Id) and **g_id** (Group Id) perfectly otherwise showing result is not possible. If you do not know the Batch or group id check the [link](#)

Step-3: Enter the **exam_type** values are " Small Test = ST, Final Test =FT, Assignment=ASS, Project= PR " then **skill_type** (Front End and Back End) then **skill_name** (HTML and CSS, Bootstrap, Javascript and jQuery, PHP and MySQL , WordPress)

step-4: Enter **out of** score that means what was the value of exam, then enter the **obtained** score then the **acutal** score. To convert in actual score use the standard mentors calculator. Finally Enter the **entry_date** assume a date or discuss with others mentors. Ensure that date must like (Y-mm-dd) format.

<input type="checkbox"/>	2 s_id	int(11)	No	None
